

Scope of publication

The *Review of Diabetic Studies (RDS)* is a journal published quarterly by the Society for Biomedical Diabetes Research (SBDR). Decisions concerning the acceptance of submitted manuscripts considered for publication in *The RDS* remains with the RDS Editorial Board. The board appreciates manuscripts containing original work of scientific thoroughness. Papers should present novel insight into biological mechanisms, principles, biomedical methods or treatments. Papers that duplicate the content of other previously published manuscripts are considered to be unacceptable unless they review particular issues. In the latter case, authors should arrange the topics with the RDS editors.

Submission of manuscripts

Three copies of the original manuscript should be sent to:

SBDR - Society for Biomedical
Diabetes Research
RDS Editorial Office
Gneisenaustr. 86
47057 Duisburg
Germany

or a text file should be attached when using the electronic online submission. You may also send your paper by e-mail to the RDS Editorial Office (Editorial (at) The-RDS.org). The manuscript must be written in English and should be accompanied by a cover letter. Submission of a paper is held to imply that its contents represent original or unpublished work, and that it has not been submitted for publication elsewhere. If the author has submitted related work elsewhere, or does so during the term in which the RDS Editorial Board is considering the manuscript for publication, then the author is responsible for providing the RDS with details.

Fees

It is the policy of the RDS not to charge the author a submission fee. There is neither a page fee nor is any payment made to the authors.

Referee procedure and publication

Any manuscript containing original work of scientific thoroughness submitted for publication in the RDS will be reviewed by two peer-scientists. The Board is endeavored to provide final decisions within two months of receipt. The decision will be accompanied

by the reviewers' and/or editors' comments. Manuscripts may be rejected, returned for specified revision, or accepted. It is the intention of the RDS Editorial Board to publish articles online immediately, even if they are still in press, and in print within the next three months after acceptance. The Board is also endeavored to get accepted manuscripts indexed in *PubMed*. Articles will be available on the journal's website and on the *Diabetes Open Directory (DOD)*. The responsibility for the content of published manuscripts remains with the author(s). The Editorial Board does not assume responsibility for the authors' views or statements.

Copyright agreement

In the case of publication the authors convey the right to publish the manuscript to the SBDR. To this end the following declaration must appear on the last page of the manuscript: " On behalf of all co-authors of the manuscript on hand (insert title of article here), we ensure that the content represent original or unpublished work and has not been submitted for publication elsewhere. We also ensure that all authors named on the title page of this manuscript have contributed to the article's development and have approved the finally submitted version. On behalf of all co-authors, we transfer the right to publish the manuscript in print and online (in parts or as a whole) to the publisher (the SBDR) and allow publication and storage in third party repositories (such as *Medline*, *PubMed* etc.), should the manuscript be accepted for publication. We retain the right to use the article for further purposes even after publication in *The RDS*. We assure to refer to *The RDS* (i.e. the SBDR) as the publisher of the original article in any cases of further utilization. The sender of the manuscript on hand declares upon submission that all co-authors have read and approved this declaration and that they agree that the declaration is effective upon submission to the RDS Editorial Board."

The declaration does not need to be signed when you submit your manuscript. In the case of acceptance, a copyright agreement form containing the same wording as the declaration above must be signed by all co-authors and sent by post to the RDS Editorial Office before publication. The corresponding form may be downloaded from the RDS website (http://www.soc-bdr.org/content/e4/e18/e198/index_en.html). The copyright remains with the authors as long as the manuscript is not accepted for publication. The right to use the results presented in the article for purposes

other than publishing (e.g. patent licensing, commercial use, further publication etc.) remains with the authors even after publication in *The RDS*. This policy expresses the society's and the Editors' intention to appreciate the authors' right to retain their intellectual property. However, in all cases of further utilization the authors are obliged to identify *The RDS* as the publisher of the original article. Any utilization by others than the author(s) of the original article requires the written permission of the SBDR as the copyright holder and publisher of *The RDS*.

Manuscript preparation

Specific instructions on the form in which the manuscript should be prepared can be found in the *Manual for Manuscript Preparation* (http://www.soc-bdr.org/content/e4/e18/e65/index_en.html). The manual describes how text, footnotes, references etc. should be prepared and explains editorial policy regarding style, standards of craftsmanship and requirements on laboratory experiment descriptions. The submission and review process will be facilitated for both the authors and referees if all submitted manuscripts conform to these guidelines. *The RDS* considers the following types of paper for publication:

Original full-length research manuscripts (clinical trials, laboratory research, etc.)

Short papers of original work

Review articles

Articles in column "Diabetic Perspectives"

Comments

Letters to the editors

Case reports

Reports on conferences, lectures, workshops etc.

A description of how to prepare each type of article can also be found in the manual for manuscript preparation.

Declaration of applied principles

Submitted laboratory research manuscripts must contain a study protocol/approval. Any human or animal study must have been approved by the author's affiliation. If human patients are involved in the study, then they should not be referred to by name. Furthermore, the patients' consent must be indicated in the paper where appropriate. Studies involving human patients must adhere to the *Declaration of Helsinki principles*, which must be declared by statement. Animal studies must entail a statement that the *Principles of Laboratory Animal Care* (NIH, No. 85-23, 1985) were followed.

Conflict of interests

Authors are asked to reveal any financial, institutional, corporate or patent-licensing arrangements associated with the submitted paper, if these are liable to trigger a conflict of interests. *The RDS* affirms to handle this information confidentially. If such information is not provided by the author and publication of the manuscript causes conflict with other interests, *The RDS* will not assume responsibility for the contents of such articles in any way.

Verifiability of results

The authors are requested to write the manuscript in a manner such that the results are verifiable, and to make materials and data available to other researchers in order to verify the conclusions of the paper. Genetic structures, cell lines, and protein structures used in the experiment should be accessible to the scientific community. Original nucleotides, amino acids sequences, proteins, or structural data, as well as other genetic data must be submitted to *GenBank*, the *European Molecular Biology Laboratory (EMBL)*, or the *DNA Data bank of Japan (DDBJ)*. Protein/peptide structures should be submitted to the *Protein Data Bank*. The accession number should appear in the paper where appropriate.

Commentary

The Editorial Board welcomes comments on articles that have appeared in *The RDS*. If you consider submitting a comment, send a copy to the author of the article and explain that you are considering submitting a comment to *The RDS*. The author's responses to the comment should be included with the submission of your comment to *The RDS*. Alternatively authors may use the electronic submission form for comments on the *DOD* homepage (<http://www.dcod.org/directory>). This ensures automatic notification of the author(s) of the original article. Comments accepted for publication in *The RDS* will also appear on the *DOD* homepage. If an author does not respond to your letter after a reasonable amount of time, then this should be explained in the submission. Authors will be invited to submit for consideration a reply to any accepted comment of this kind.
